PROJECT OVERVIEW:

This 11-day adventure takes students into the remote Fijian highlands, immersing the group in the traditional culture and lifestyle of a remote community. Staying in traditional ‘bure’ accommodation in the Magodro and Navosa District, students will experience life without electricity in a community that relies on subsistence farming.

This experience provides the opportunity to learn how a foreign community interacts socially, culturally and economically for sustainability. The boys will also consider sustainability from a land use perspective, and will be involved in preparing the land and planting a trial of new crops (funded by part of their program costs).

The program will also see students trekking to a remote waterfall, being welcomed into the village in a traditional ceremony, visiting the local kindergarten and primary school (where there will be the opportunity to donate educational resources) and snorkelling around an uninhabited tropical island at the end of their program experience.

Destination Dreaming programs are designed to develop young people into active global citizens. This experience offers staff and students a perfect balance of culture, service, adventure, language and leadership opportunities.
